NETWORK VIDEO RECORDING

SOFTWARE

Watch U®

Simple & Powerful

- Digital (IP) Network and/or Analog combination structure can manage digital image, audio and data
- Support 85 camera brands and more than 1,000 models
- Select 1,4,9,16, … 100 layouts of camera images and also support multiple monitors
- At monitoring status, an icon locates at the corner of each image indicates the camera is recording or not
- Each camera is able adjust to different frame rate and resolution based on the requirements
- Support JPEG, MPEG4 and H.264 video compression types
- Except store recording images at hard drives, user also can add external disk array as storage (loop recording feature is available)
- Use either motion detection, timeline bar and etc. features when playing back video
- At the Time Line bar, user can do fast forward, fast backward, slow playback at each frame, stop, play and etc.
- Playback up to 16 cameras at same time while cameras are still at recording mode (non-stop)
- Local and Remote sites store previous recorded video through network, then transferring as AVI or ASF format and burning video in a compact disc
- Monitoring image can show date, time, camera status (resolution, fps, streaming), alarm window and in different layouts
- Digital Zoom-Out feature for investigation or audition
- Users can do access, store, view, setup and etc. based on the authority limitation
- Watermark is available for verification of recorded video
- Setup camera's Chinese name individually
- Support PSIA & ONVIF cameras
- Provide alarm images
- Support iOS and Android Web Client
- Support E-Map
- Manually start emergency recording button and record at highest frame rate
- Support scheduled recording
- Optional LPR System is available
- Optional Analog and SDI capture cards are available
